Brief Intro of the Event:
Jadavpur University Entrepreneurship Cell organised DataBinge as part of E-Weekend 2023 for first-year students. DataBinge, an engaging data analytics event, challenged participants to unravel insights from a provided dataset using tools like PowerBI, Pandas, Google Studios, and Jupyter Notebook. The event aimed to test analytical prowess, problem-solving skills, and proficiency in data visualisation.

EVENT HIGHLIGHTS:
At the start of the entrepreneurial contest, teams got a special set of data that matched the event's theme. They used tools like PowerBI, Pandas, Google Studios, and Jupyter Notebook to dig into the data and answer some important questions. Their challenge was to understand the

data, solve problems, and show their findings in a set time. Judges looked at how accurate their answers were, how well they showed the data, and how they solved problems. This event gave teams a chance to share what they found with judges. They explained step by step how they figured things out. Judges looked at their work carefully to see how well they understood the data, how they showed it, and how they solved problems. The competition focused on showcasing teams' proficiency in interpreting data for entrepreneurial purposes, emphasising the practical application of analytical skills in the business context.
