The idea :

The gamification of energy conservation using Internet of Things. Where the user is provided with livetime analysis about energy usage directly in their smartphones and compare their usage with that of others. Prototyped product could be set up in houses to monitor usage live and provide feedback on how to optimise usage and reduce wastage. Saving government production costs worth millions and individuals the satisfaction of playing energy with their friends and neighbours.

- Approximate budget req for next level (startup level) : 2 lakhs

- Any fund received from TEQIP or JU (other than TEQIP) : Received 20k per head from JU for foreign paper presentation.
